

FOR IMMEDIATE RELEASE

Greenward™ Ridge Vent Voted Top Product of 2009

February 4, 2010 New York. Energy Alternatives, LLC, developer and manufacturer of the patent pending Greenward™ Ridge Vent and Greenward™ Ridge Vent System, was voted Top Product of 2009 by Metal Roofing Magazine. The Greenward™ Ridge Vent System harvests ambient hot attic air sitting latent and unused in a home's attic as it escapes through the ridge of the roof. The thermal heat is used as a form of renewable energy to preheat the incoming water into your hot water tank. The homeowner consumes less energy, reduces their CO2 emissions and saves money.

The patent pending Greenward™ Ridge Vent and Greenward™ Ridge Vent System are the outcome of a multi-year sustainable research initiative by Energy Alternatives, LLC. "We make it possible and affordable for every homeowner to substantially reduce their energy costs and have a direct impact on their home's contribution to their community's carbon footprint, all while their home's ridge vent does what it already does - ventilate their attic" says Kevin B. Scott, President of Energy Alternatives, LLC. The Greenward™ Ridge Vent System provides homeowners with an inexpensive method to heat their incoming water into their hot water tank by reusing the wasted heat in their attic. As the hot attic air escapes through the ridge of the roof, it passes over flexible tubes contained in the ridge vent material. These tubes carry an environmentally friendly water/corn based glycol solution that gets heated by the escaping hot attic air. A circulator pump pushes the hot solution in a closed loop into a hot water storage tank where it heats the incoming city or well water. When your hot water is being used it gets replenished with hot water heated by your hot attic air. In this way, each and every homeowner can become part of the "green" movement by consuming less energy, reducing CO2 emissions and saving money.

"Being voted as one of the Top Products for 2009 by Metal Roofing Magazine is a great honor. It confirms our belief that the roofing industry is becoming more energy conscientious and green building is becoming more prominent in the marketplace" says Kevin B. Scott.

About Metal Roofing Magazine

Metal Roofing Magazine is the only publication devoted solely to metal roofing. The magazine serves roofing contractors, general contractors/remodelers, architects,

specifiers, building material dealers/distributors, gutter installers, consultants, engineers, manufacturers, and their representatives. The magazine was created in 2001, and is published seven times per year, including the *Metal Roofing Buyers' Guide* and The Idea Book, an architectural design resource.

About Energy Alternatives, LLC

Energy Alternatives is based out of Connecticut and is committed to sustainable energy and making it affordable for everyone. Energy Alternatives was designated a “Company to Watch” by the Connecticut Technology Council, named a “Top Product for 2009” by Metal Roofing Magazine and recently won a Green Dot Award.
